

K2 Data Systems, Inc.

Case Study Wonderware Archestra Standards Development

Industry: Food Manufacturing (cheese)

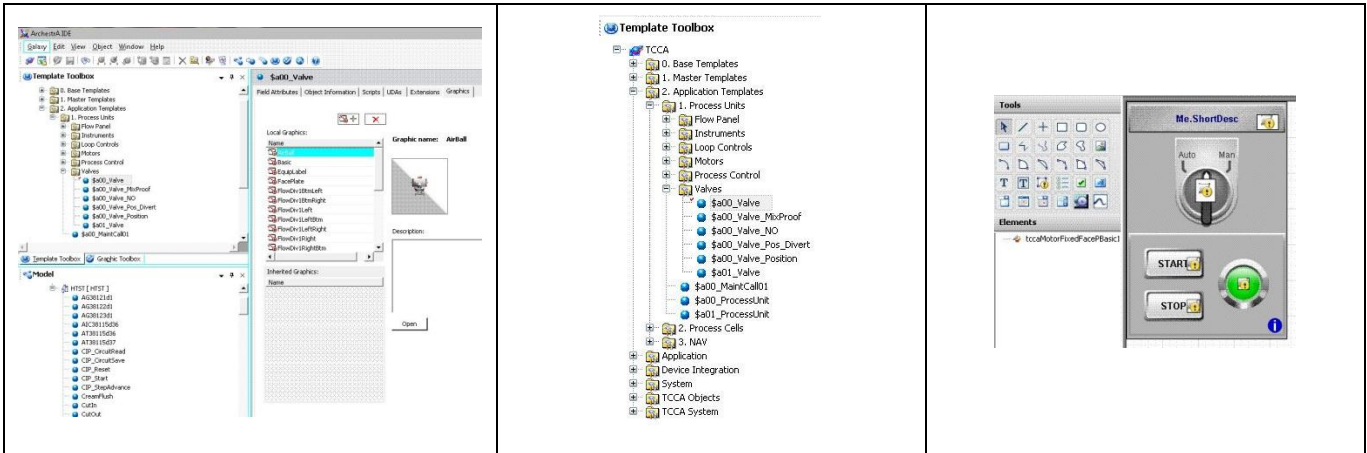

Software: Wonderware System Platform, Microsoft SQL Server

Description: Users of Wonderware InTouch face a sizeable task in switching to System Platform. If done right, this software provides a scalable and powerful solution, with a growing list of compatible products. K2 is fully certified with over 10 years of experience. Let us help you get started right.

Project: A major cheese manufacturer wanted to migrate from InTouch to Wonderware’s System Platform. This new platform, while providing many benefits, including powerful functionality, object-oriented programming, and development efficiencies, requires a thorough design process. K2, a Certified System Platform Integrator with over 20 years of Wonderware experience, was chosen to develop the Archestra Galaxy, standard templates and objects, and standard operating procedures for use internally as well as by the many OEMs that provide equipment. Import tools were also developed with SQL Server Integration Services to speed the development process.

The standards developed are being used for all new Wonderware development, as well as a gradual migration of existing functionality.

Specialties

- Manufacturing Intelligence
- Reporting Systems
- HMI's
- Control Systems
